

Allergies can cause real illness.

“An undiagnosed or undetected allergic condition can produce conditions that are equally serious. Many times the allergic reactions produce symptoms that mimic other conditions.”¹

As an allergy sufferer, you are constantly aware of the everyday tasks, common foods, and things that make life special, and yet at the same time reminded how you are adversely affected.

What are allergies?

Researchers are still searching to find the exact cause of allergies. Western science defines an allergic reaction as the body's defense mechanism against an allergen or foreign substance. The body's immune system takes over in an attempt to protect.

Western medicine has used several medical tests to determine the extent of one's allergies including: 'intradermal tests,' 'patch tests,' 'scratch tests,' and various others. These have been the conventional methods used by doctors for many years.

Desensitization using injections over a period of years has been the approach used by medical allergists. Until recently there has been no easy way to treat a person's allergies.

Now you can easily eliminate your allergies - permanently and forever!

How does this work?

The initial diagnostic consultation uses applied kinesiology to determine to which substances you are allergic. Treatment consists of activating a specific series of acupressure points and finishing with a simple acupuncture treatment.

“This technique is a truly revolutionary system for dealing with allergies. It is a natural, drug-free, painless, and non-invasive method that can be used safely on everyone—from a one-day-old infant to anyone of advanced age—to permanently eliminate allergies and symptoms arising from previous exposure to allergens and their allergic manifestations.”²

You then go home and follow a simple set of instructions for the next 25 hours.

You can eliminate your dependence on medication for your allergies.

You can eliminate your allergies without injections.

“Allergens are cleared (treated) one at a time with this technique, and best results are obtained if allergens are cleared in a specific sequence. Normally only one item or family of items is treated on a given day. The substance must then be completely avoided for 25 hours following treatment. In most cases, that’s all it takes...one session to permanently eliminate an allergy. However, individuals who are highly sensitive may sometimes require additional combination clearings.”³

“At last there is freedom from allergies and ailments arising from allergies.”⁴

Join the thousands of patients who have been successfully treated with this technique pioneered over 13 years ago by Dr. Devi Nambudripad in her quest to find relief from her allergies. Her story can be found in the book “Say Good-bye to Illness.”
